What Is Khoros?

Khoros is KRI's primary software technology. Khoros is used as both a scientific problem solving environment and as a software development and integration environment.

Khoros provides:

- Solutions for scientific and engineering problems
- A Visual Programming Environment for Solution Creation and Problem Solving
- Software Development Environment and Tools
- Libraries for Portability, Scalability, Data Access, GUI creation, Data Visualization
- Visualization Applications

Containing approximately 900,000 lines of code, Khoros is made up of over 300 different programs and libraries that are organized into *toolboxes*. Each toolbox contains different capabilities; toolboxes may be mixed and matched according to the user's needs. Khoros supports a variety of computer *platforms*.

There are two versions of Khoros:

1. The commercial version, Khoros Pro, which is available for purchase on CDROM. To learn more about Khoros Pro 2001, please view our Khoros Pro 2001 On-Line Demo.

2. The Khoros Pro 2000 Student Version. This version of Khoros is licensed and restricted to use by qualifying students only.

Khoros is... instant solutions for common engineering and scientific data analysis and visualization problems

Khoros offers over 300 operators (programs) for *information processing, data exploration, and data visualization.* These operators facilitate problem solving in a wide variety of application domains used in research, science, government and industry. The broad categories into which operators are grouped include:

- Data Access and Manipulation
- Data Processing
- Data Visualization Applications
- Image Processing
- Matrix & Vector operators
- 3D Visualization and Software Rendering

- Sample Data for use with Khoros

Khoros is ... a visual programming environment for creation of customized solutions, modeling and simulation

All Khoros programs may be run independently or executed from within the *visual programming environment, Cantata.* With Cantata, visual programmers can use the information processing, data exploration, and data visualization operators of Khoros together in a graphically expressed, data flow visual language to rapidly prototype new solutions.

Khoros is ... software development tools that help you write new programs and maintain them throughout their life cycle

A suite of tools contained within an integrated *software development environment* allows you to write new data processing operators, create new visualization applications, and automatically extend the visual language to include new programs or integrate existing ones.

Khoros is ... libraries for portability, scalability, data access, GUI creation, data visualization

All the data processing and visualization routines in Khoros utilize the libraries provided by the three major *program services* that comprise the Khoros system infrastructure. These libraries were created by the KRI software development team over years of research, design and development during the process of creating and evolving the Khoros system. Public application programming interfaces (APIs) are provided by the Khoros program service libraries so that developers using Khoros can also employ the functionality provided by the Khoros infrastructure.

- *Foundation Services* provide a portable operating system abstraction.
- *Data Services* provide a powerful system for accessing and manipulating data.
- *GUI & Visualization Services* allow easy GUI creation and data visualization using images & graphics.

Khoros is ... Visualization Applications

Khoros offers a number of data visualization applications, including:

- *animate*, an image sequencing/animation program,
- *editimage*, an image display & manipulation package,
- *extractor*, an ROI extraction program,
- *getimage*, for capturing images from your workstation display,
- *xprism*, a 2D/3D plotting package,
- *putdata*, a non-interactive data display tool
- *editcmap*, a colormap alteration tool
- *spectrum*, an interactive image/signal classification application

The Khoros software system is composed of _toolboxes_.

A toolbox is a collection of programs and libraries that are managed as a single entity or object. Typically, a toolbox contains programs and libraries which have a similar function or common objective.

The toolboxes distributed by Khoral Research, Inc, as part of the the main Khoros system are described below. The only _required_ toolboxes are bootstrap, dataserv, and design, although the datamanip and envision toolboxes are essential for doing any kind of information processing or visualization. You may pick and choose among the remaining toolboxes as you see fit.

- BOOTSTRAP contains Foundation Services and the base utilities for installing Khoros.
- DATASERV contains Data Services.
- DESIGN contains GUI & Visualization Services along with the software development applications.
- DATAMANIP contains general data manipulation operators.
- ENVISION contains general data visualization applications.
- GEOMETRY contains 3D visualization routines and a software renderer.
- IMAGE contains general image processing operators.
- MATRIX contains matrix and vector operators based on LAPACK.
- MIGRATION contains tools for migrating Khoros 1.0 programs.
- RETRO contains image processing operators from Khoros 1.0.
- SUPPORT contains miscellaneous utility programs.
- SAMPLEDATA contains sample data that may be used with Khoros.

Platforms

The Khoros system was developed using X Windows and the X Toolkit on a Unix-based operating system. Khoros supports a variety of platforms, including DEC/OSF, PC/Linux, SGI/Irix, and Sun/Solaris. It is also available for Windows NT 4.0 using the Exceed X-Server.
